

## RUBBER BUMPER INSTALLATION FOR GLASS OR STONE SHELVES

Rubber Bumper discs are to be adhered to the underside of each shelf between the shelf and the horizontal shelf support tubes.

Determine the proper location of the bumpers by placing the shelf centered front-to-back on the shelf support tubes and centered left-to-right between the verticals. Install two bumpers per horizontal tube.

An easy way to align the Silicone Rubber Bumper Discs is to carefully place them on top of the glass shelf, exactly centered over the horizontal shelf support tubes.

And then flip the glass shelf over, so that the bumpers are resting centered on the support tubes.
